prioritization, measurable deliverables, and transparent communication. I can provide technical proposals, time estimates, and references upon request.

EDUCATION & CERTIFICATIONS

Formal education and certifications are available upon request. Relevant certificates may include security and data-related qualifications —please advise if you would like them listed explicitly

AVAILABILITY

Available for remote freelance projects. Typical engagements include one-off assessments, short-term development sprints, and ongoing support retainer arrangements.

References and full portfolio available upon request. Contact: greatgreat081@gmail.com

WORK EXPERIENCE

- Secure ECommerce Website (Freelance) Designed and implemented a responsive e-commerce website with a focus on secure checkout and customer data protection. Implemented input validation, HTTPS, secure session handling, and content security policies to mitigate common web vulnerabilities. Tools: React, Node.js, Express, SQL. Result: Delivered a production-ready site with improved performance and security posture.

- Penetration Testing & Security Remediation Conducted vulnerability assessment and penetration testing for a small business web application. Used Nmap, Nikto, Burp Suite, and Metasploit to identify vulnerabilities, then provided prioritized remediation guidance and patch verification. Result: Mitigated critical issues and improved overall security score.

- Data Pipeline & Dashboard for Marketing Analytics Built a data pipeline to centralize campaign and website analytics, cleaned and transformed data for reporting, and created interactive dashboards. Tools: Python, SQL, Power BI, Google Analytics. Result: Enabled stakeholders to track campaign ROI and reduce reporting time by ~50%.
